Ph.: 9312670679, 9212213717, 9811719477

YOUR BODY HAS 75% OF WATER ,MAKE SURE IT SHOULD BE PURE

DM Plant

- Further purifies the RO-treated water to achieve very low conductivity and high-purity water.
- Produces very high-purity water with very low total dissolved solids (TDS).
- No significant wastewater production.
- Effective for specific applications requiring ultrapure water.

Commercial

- Commercial RO plants are designed to handle large volumes of water
- Store the purified water for subsequent use

FEATURES

- Remove hardness, salinity, Bacteria, Virus & harmful chemicals.
- Reduces sodium hence good for low sodium diet. especially for high blood pressure patients.
- Enhance taste of water by removing undesirable salts.
- Easy to install, operate and maintain.

How Life care R.O. Water Purifier is superier to Conventional UV water purifier

- UV based purifiers do not remove dissoloved/ Soluble impurities like heavy metals fluorides & Arsenic which may cause deadly diseases where Life Care R.O. System removes these impurities too.
- Conventional UV based purifies only deactivate Bacteria and Viruses with the help of UV Rays. However Bacteria & Virsues remain suspended and some of them get re-activated with time/ change in temperature.
- UV based purifiers do not remove water hardness as compered to Life Care R.O. System.
